

Indian Plum

Oemleria cerasiformis

Distribution: Indian Plum is native to western North America. It can be found from southern British Columbia to northern California.

Growth: The mature height for Indian Plum is 10 to 15 feet tall.

Adaptability: This Plum is suitable for locations from full sun to partial shade and moist to dry soil conditions. It likes dry to moist woods, streambanks, and roadsides. It is adaptable to garden conditions.

Comments: Indian Plum is typically the first shrub to flower in the spring. Leaves have a cucumber smell when crushed. The flowers are greenish white in color with peach to purple color fruit.
