

## Purple Coneflower

*Echinacea purpurea*

**Distribution:** They are native to the eastern half of the U.S. and are most commonly found growing in prairie habitats.

**Growth:** 36" tall x 24" wide. *Echinacea purpurea* (Purple Coneflower) is a favorite wildflower that blooms heavily for many weeks in late summer.

**Adaptability:** Thrive in our gardens when provided with well drained soils, plenty of sunshine and moderate to dry moisture conditions depending on the species and cultivars. Healthy individual coneflowers will grow in the garden for 3 to 5 years.

**Comments:** Bee Friendly, Attract Butterflies, Attract Hummingbirds, Attract Birds, Native, Great For Mass Plantings, Extended Bloom Time (more than 4 weeks), Multiplies / Naturalizes, Easy To Grow, Good For Cut Flowers, Good For Dried Flowers, Deer Resistant
