

Classification Description

Class A - Non-native species whose distribution in Washington is still limited. Preventing new infestations and eradicating existing infestations are the highest priority. Eradication of all Class A plants is required by law.

Class B - Non-native species presently limited to portions of the State. Species are designated for required control in Asotin County where they are not yet widespread. Preventing new infestations in Asotin County is a high priority. In Asotin County where a Class B species is already abundant, containment is the primary goal.

Class C - Noxious weeds that are typically widespread in WA or are of special interest to the state's agricultural industry. The Class C status allows county weed boards to require control if locally desired, or they may choose to provide education or technical consultation.

*Indicates a species designated for required control in Asotin County.
